SAMUEXPO THE INTERNATIONAL BIENNIAL EVENT THAT GATHERS FOUR EXHIBITIONS

A national and international reference event, thanks to the presence of companies from all over the world.

A significant opportunity to build new business relationships, to network, to find out about the news in the leading sectors.

A meeting opportunity between the builders of machinery and technologies for the manufacturing industry and end customers (distributors and buyers)

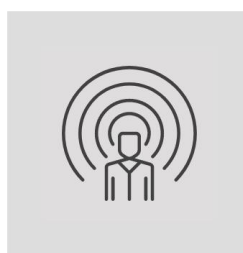

THE NUMBERS OF **SAMUEXPO 2022**

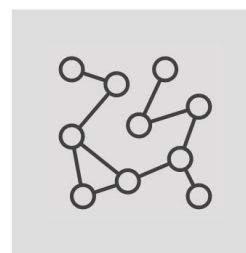

686 EXHIBITORS

15% FROM ABROAD

85% FROM ITALY

11.588 VISITORS

EXHIBITION OF TECHNOLOGIES AND TOOLS FOR METALWORKING

SamuMetal has become a point of reference in the trade fair industry in the sector of metalworking technologies and tools.

The event is a perfect opportunity to meet customers, distributors and buyers, also from abroad, with the aim of finding new business and synergies. It is also an ideal chance for investigating issues that are the object of daily discussion between manufacturers and end-users, as well as technical, economic, quality and safety standards.

EXHIBITION OF PLASTIC MATERIALS, TECHNOLOGIES AND MACHINES

SamuPlast is the top show for technologies, machines and plastic materials because it grants a high visibility to operators who know how to qualify as strategic partners for the most advanced manufacturing companies, especially in the creation, design and production processes.

The ability to combine very aggressive price policies with considerable resources devoted to the design stage represents a very strong competitive asset, which conveys the interest of numerous international buyers towards the manufacturing hub in the North East.

EXHIBITION OF SUBCONTRACTING METALWORKING

SubTech is part of a territory traditionally linked to componentry and mechanics, a district of cutting-edge and highly specialized companies.

SubTech is the ideal meeting place for national and international customers, thanks to the high visibility granted by the three simultaneous events which cover the whole world of technical processing related to metals and plastics.

FABBRICA 4.0, Digital revolution area, is an exhibition and demonstration space devoted to corporate workshops where some of the innovations of the 4th industrial revolution will be explored and presented.

Within this area, the types of products / services that implement the technologies defined as enabling by the Industry 4.0 national plan are allowed
